OUTDID UNIFIED PVT LTD

Innovative Technology Solutions for a
Smarter Future

Who We Are

OUTDID UNIFIED PVT LTD is a technology-driven company delivering scalable, secure, and innovative digital solutions. We combine strong leadership practices with cutting-edge engineering to help businesses build trust, manage teams effectively, and achieve successful outcomes in dynamic environments.

Our Vision

To empower businesses with innovative, reliable, and intelligent technology solutions that drive growth and long-term success.

Our Mission

To deliver high-quality software solutions by combining technical excellence, leadership values, and customer-centric innovation.

SOFTWARE TEAM OVERVIEW

- Our Hardware Team is the backbone of product innovation—transforming ideas into robust, production-ready electronics.
- We specialize in end-to-end electronic hardware design, including schematic design, PCB layout, driver interfacing, sensor integration, and power electronics.
- We bring together experts with rich experience in MCU/MPU systems, analog and digital circuit design, signal integrity, power supply design, and DFM/DFT practices, ensuring seamless integration between hardware, firmware, and system-level requirements.

TECHNOLOGY STACK

FRONTEND – React.js, React Vite, HTML5, CSS3, Bootstrap, jQuery, JavaScript.

BACKEND – Node.js, Express.js, PHP, Python(Django, Flask)

MOBILE & DESKTOP – FLUTTER (ANDROID, Windows EXE, macOS, Linux), Dart

DATABASE – MongoDB, MySQL, SQL Server, Firebase Realtime DB, Redis (Caching, Session Management).

CLOUD & HOSTING – Docker, cPanel, Firebase hosting, Linux VM hosting, AWS hosting

PROTOCOLS & COMMUNICATION – MQTT, WebSocket, TCP, OCPP 1.6j

INTEGRATIONS – Razor pay, Stripe, SMS & Email APIs, Firebase Push Notifications (FCM)

API Documentation & Monitoring

Swagger UI (Node.js API documentation & testing)

API Health Checks & Validation

OTHER CAPABILITIES – SEO

TOOLS & WORKFLOW

AGILE METHODOLOGY

- Iterative development
- Fast feedback loops
- Adaptive planning

GITHUB

- Source control
- Branching & collaboration
- Code reviews

POSTMAN

- API testing & automation
- Integration validation

TESTING TOOLS

- Manual Testing – Functional, UI/UX
- JMeter – Performance/load testing
- REST Assured – Automated API testing

FIREBASE SERVICES

- Realtime DB, hosting, notifications,
- Firebase Cloud Messaging (Push Notifications)
- Authentication & analytics

SOLUTIONS WE OFFER

Modern Web & Mobile Development

We create seamless, cross-platform applications using technologies like React, Flutter, HTML, CSS, Bootstrap, Vite, and jQuery. Our backend systems are powered by Node.js, PHP, and Python (Django, Flask), supported by MySQL, SQL Server, and MongoDB — ensuring scalable, responsive, and user-friendly digital experiences.

Real-Time Communication Systems

From chat interfaces to live dashboards, we implement MQTT, WebSocket, and TCP protocols for real-time interaction. These systems are designed for performance and reliability, whether it's for users, devices, or operational control.

EV Charging Platform Development (OCPP 1.6j)

We specialize in EV Charging Management Systems that support OCPP 1.6j, enabling real-time charger-to-server communication, session monitoring, and secure transaction data handling.

Smart IoT & Connected Devices

Our IoT solutions bring smart ecosystems to life — allowing businesses to monitor, control, and automate devices through secure, cloud-connected environments.

Scalable Cloud-Native Architecture

We deploy resilient and containerized applications using Docker and orchestration tools. With cloud hosting via cPanel and Firebase, we ensure performance, scalability, and uptime across platforms.

API Development & Third-Party Integration

Our team builds secure and scalable APIs and integrates essential services like payment gateways (Razorpay, Stripe), all tested and validated through Postman for seamless communication.

Agile Development & Team Collaboration

We follow Agile methodologies for iterative development and quick feedback cycles. GitHub is our hub for source control, versioning, and collaborative coding.

End-to-End Quality Assurance

We ensure software quality through manual testing, automated API testing with REST Assured, and performance/load testing using JMeter — guaranteeing robust and reliable outcomes.

Firebase Services for Mobile Apps

From real-time databases to push notifications and cloud hosting, Firebase powers many of our mobile applications for enhanced speed and engagement.

Real-Time Messaging & Notifications

We integrate SMS and Email APIs to deliver OTPs, alerts, and transactional messages in real time — ensuring consistent and secure user communication.

Search Engine Optimization (SEO)

We apply SEO best practices to improve site visibility and performance — optimizing everything from metadata to page speed for better search engine rankings.
